

Grid intelligence

for a cleaner energy future.
communication system. No client assets, logos, photography or proprietary
data are used.

Project overview

Turning a complex energy operation into a clear visual story.

Brand system

Logo, palette, typography and component rules.

Data design

KPI cards, charts and status patterns.

Presentation

A narrative structure for stakeholder communication.

Core design principle

Make operational information feel approachable without removing technical depth.

Brand direction

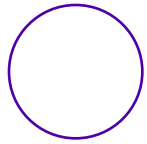

A calm, technical
identity built around
trust, efficiency and
transition.
Soft mint
Typography & tone
A fictional identity
deliberately separated
from the source brand.

Deep navy
Alert coral
Bold headlines • short
labels • generous
spacing • restrained
colour

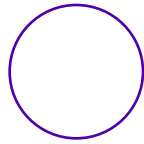

Signal teal
Warm paper
ENERGY / DATA /
IMPACT

A calm, technical identity built around trust, efficiency and transition.

Typography & tone
Bold headlines • short labels • generous spacing • restrained colour
ENERGY / DATA / IMPACT
A fictional identity deliberately separated from the source brand.

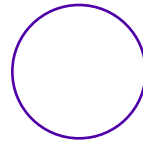

Information hierarchy

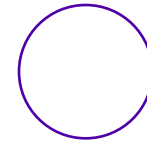

Three layers make dense operational content easier to scan.

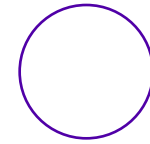

STRATEGY

SYSTEM

DETAIL

1. Lead with the decision. 2. Support with the evidence. 3. Keep technical detail available but secondary.

Performance snapshot

A fictional dashboard translates plant signals into decisions.

OUTPUT

82.4 MW

EFFICIENCY

91.8%

CO₂ AVOIDED

14.2 t

24-hour output trend • fictional values

System architecture

Reusable components keep reports, dashboards and presentations consistent.

INPUTS

Meter data / maintenance / weather

LOGIC

Normalise / compare / flag

OUTPUT

KPI / trend / exception

ACTION

Investigate / optimise / report

Data visualisation

Charts emphasise trends
and exceptions rather
than decoration.
Exceptions stand out.

MON
Colour is reserved for
status, thresholds and
changes in direction.
Everything else stays
quiet.

SUN

Charts emphasise trends and exceptions rather than decoration.

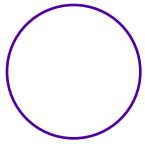

MON

SUN

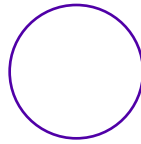

Exceptions stand out.

Colour is reserved for status, thresholds and changes in direction. Everything else stays quiet.

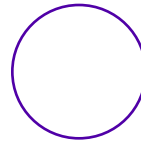

Workflow

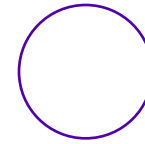

From raw operational inputs
to a concise decision-ready
view.
A reusable story arc

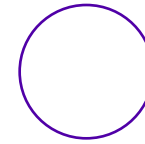

COLLECT
The workflow is intentionally
generic: it demonstrates
information design and
systems thinking without
revealing a real operational
process.

CLEAN

MODEL

DECIDE

Interface concept

A simplified monitoring screen for energy managers.

LIVE GRID VIEW

Load

68%

Reserve

22%

Status

Stable

Icon language

A compact icon set replaces inconsistent third-party symbols.

Location

Flow

Trend

Alert

Healthy

Report

Icons are custom vector symbols, intentionally different from the source material.

Before → after

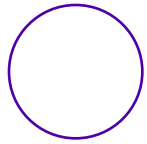

The same information
becomes faster to
understand.
status cues
components

Before
After

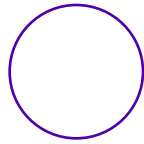

Dense blocks, mixed
emphasis, inconsistent
Clear hierarchy,
purposeful colour,
reusable

The same information becomes faster to understand.
Before
Dense blocks, mixed emphasis, inconsistent
status cues
After
Clear hierarchy, purposeful colour, reusable
components

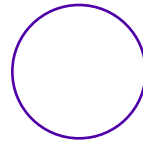

Portfolio takeaway

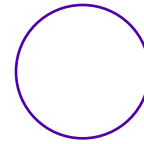

Skills demonstrated without exposing confidential material.
Data visualisation
This concept is deliberately fictional. It demonstrates process and craft rather than claiming client outcomes or exposing protected assets.

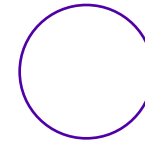

Portfolio-safe skill proof
Iconography

Visual identity systems
Information hierarchy

Presentation & storytelling
Component thinking

Dashboard / UI composition
Fictional data handling
