

Sustainable Finance Framework

A fictional investor-facing case study demonstrating ESG taxonomy, KPI design, financing logic and transparent reporting.

FICTIONAL • ILLUSTRATIVE DATA • ORIGINAL VISUAL IDENTITY

The brief

Build a credible sustainable-finance narrative without relying on proprietary client material.

Objective

Connect eligible projects to measurable environmental

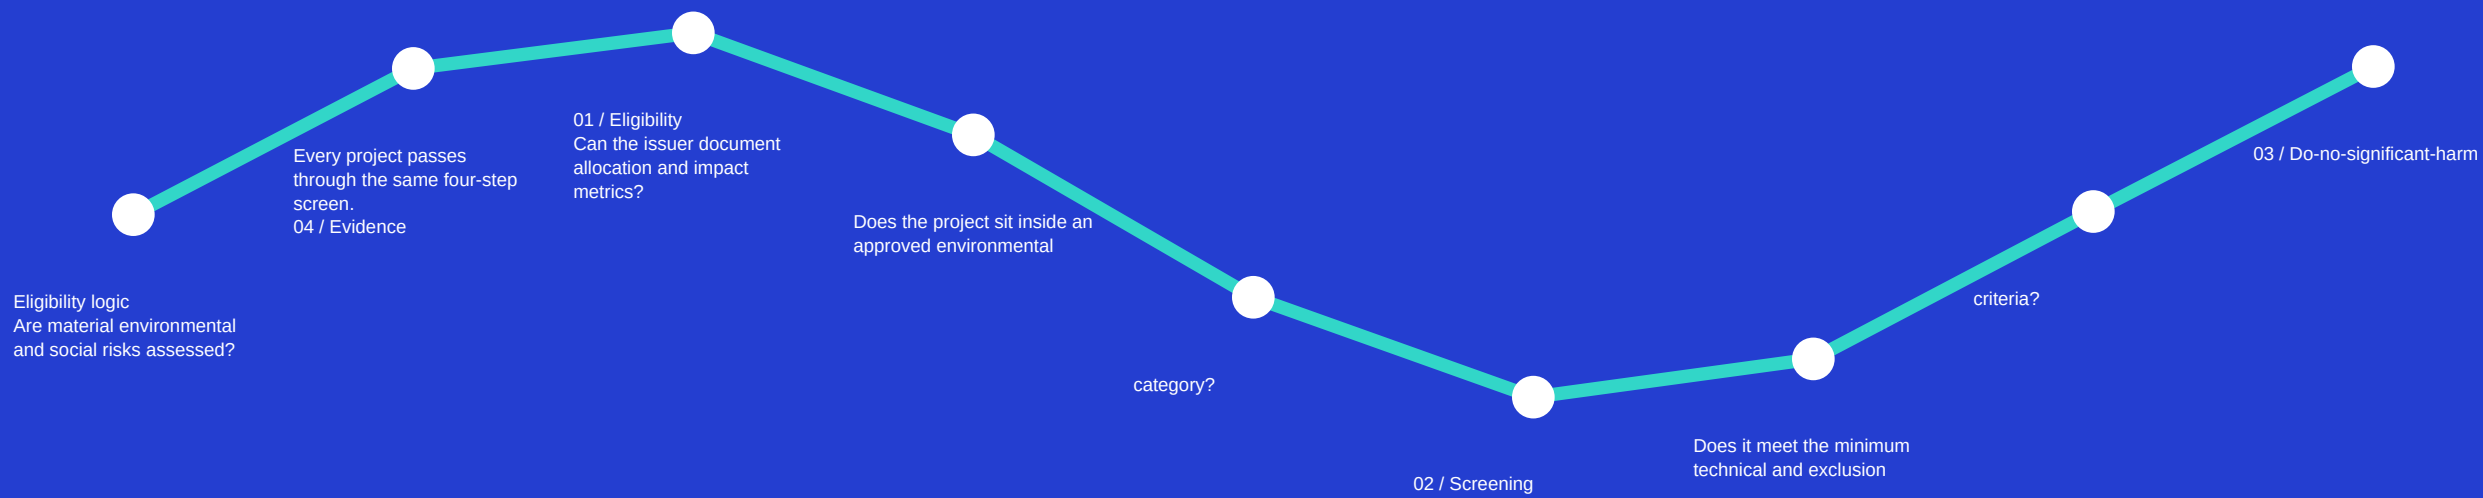

outcomes.
governance.
understand.
fictional.

Fictionalised case study. This project is an original reconstruction inspired by the type of sustainable-finance and investor communication work I have

delivered. Company names, visual identity, figures, KPIs and examples have been changed or invented to avoid exposing proprietary information.

The

case study demonstrates my ability to structure a finance framework, define measurable outcomes and communicate them clearly.

GreenHarbor Finance is fictional. All allocations, impact figures and methodology examples are illustrative.
